ABSTRACT OF THE DISCLOSURE

5 A door body forming a base component of a door and pertaining to a door of a motor vehicle. The door body including a frame structure which includes a window frame with a guiding element for a window pane. The door body also including an aggregate support for receiving functional components of the vehicle door. At least the components which receive the window pane and belong to a window lift are pre-mounted on the aggregate support. The door body also includes at least one fixing knot that is provided on the frame structure. The frame structure can be
10 connected to the door body via the node. The door module is provided with an adjuster for adjusting the position of the window frame essentially crosswise in relation to the door level and with regard to the at least one fixing node. The aggregate support extends into the door level.
